SUMMARY

Freelance .NET Backend Developer specializing in ASP.NET Core, Clean Architecture, and Entity Framework Core, building secure, scalable, production-grade web applications and APIs. Built 4 backend projects (two live) with up to 80 endpoints, covering JWT/Identity authentication and role-based authorization. Owns deployment end-to-end: CI/CD, hosting, SQL Server provisioning, and custom domain/DNS setup. Working knowledge of React.js, Flutter, HTML, CSS, and JavaScript.

EDUCATION

Bachelor in Computer Science, Al-Shorouk Academy Oct '22 — Jun '26

- Graduation Project — scored 200/200 (full mark).

SKILLS

Languages	C#, Java, Dart, JavaScript
Backend	ASP.NET Core, MVC, Web API, JWT, Identity Framework, AutoMapper, SignalR, Hangfire
Database & ORM	SQL Server, Entity Framework Core, LINQ, Redis
Design & Architecture	Clean, Onion & Layered Architecture, CQRS, SOLID, Design Patterns, Repository / Unit of Work / Specification
DevOps	Git, GitHub Actions, CI/CD, Serilog
Frontend	React.js, Flutter, HTML, CSS, JavaScript
Spoken Languages	Arabic (Native), English (Fluent)

EXPERIENCE

CodeAlpha — Backend Developer Intern Oct 10— Nov 10

- Delivered backend projects as assigned internship tasks over a one-month internship.

HumaVolve — .NET Training Program Link Oct '26 (one week)

- Completed an intensive one-week .NET training program and earned a Certificate of Achievement.
- Implemented Product features using the CQRS pattern and reworked DTOs as part of hands-on tasks.

PROJECTS

FrameX — Frames E-Commerce LiveDemo | GitHub

- Full-stack e-commerce store built with ASP.NET Core Clean Architecture, MediatR CQRS, FluentValidation pipeline behaviors, AutoMapper, and EF Core, with a React (Vite) + Tailwind frontend.
- Product catalog with variants (color/size), per-variant stock, cart, wishlist, and guest checkout with Paymob card payments, cash on delivery, and automatic order receipt emails.
- JWT + Identity authentication with role-based access (Admin/Customer) and a seeded admin account.
- Admin dashboard to manage products, categories, orders, and visitor stats; soft delete with global query filters.
- Deployed end-to-end: frontend on Vercel, API and SQL Server on MonsterASP.

MGolden — Precious Metals & Crypto Tracker LiveDemo | GitHub

- Full-stack tracker for 7 assets (Gold, Silver, Platinum, Palladium, Copper, BTC, ETH) with a bilingual (EN/AR, RTL) React frontend.
- Backend on 5-layer Clean Architecture with a background service syncing prices every 30 seconds and a cleanup service purging old records every 6 hours.
- Currency conversion with in-memory caching of exchange rates (12h) to stay within free-tier API limits.
- Deployed with a custom domain and API subdomain: Vercel (frontend), MonsterASP (API + SQL Server).

Airport Management System GitHub

- Streamlines flight management, passenger services, and booking workflows.
- Built with ASP.NET Core, SQL Server, and Clean Architecture; 80 endpoints.

GoalZone API — Football Management System GitHub

Built a football management API using ASP.NET Core,CleanArchitecture ,Entity Framework Core, and SQL Server Retrieved match schedules,Live Scores and match details,Final Resuilt.

CERTIFICATIONS

ASP.NET Core Diploma, Route Academy Link Apr '25 — Aug '25

- 600+ hours of intensive training covering C# Fundamentals, OOP, SOLID Principles, and Design Patterns.
- Data access with LINQ and Entity Framework Core.
- Web development with ASP.NET Core MVC and building RESTful APIs with ASP.NET Core Web API.
